

Product of Tasmania

# Natrasol

## AVOCADO PRODUCTION

Natrasol is a pure seaweed concentrate made from fresh seaweed stems collected from the west coast of Tasmania capturing the richest source of natural growth stimulants of any seaweed worldwide. Refer to Natrasol Seaweed Extract, Natrasol + Plus a complete N,P,K fertiliser and Natrasol Fish Hydrolysate for further information

Foliar applications of Natrasol is about feeding the tree directly, rather than making up for deficiencies in the soil.

### BENEFITS

- ✓ Improves plant ability to uptake soil nutrients & trace elements
- ✓ Provides a natural resistance to insect and fungal attack
- ✓ Improved fruit set and yield and quality
- ✓ Reduces alternate bearing triggered by plant stress
- ✓ Improve leaf chlorophyll levels, photosynthetic potential resulting in higher fruit yield
- ✓ Stimulate good soil bacteria and worm activity

Natrasol is a premium grade seaweed extract with a particle size of 100 microns.

For optimum plant uptake, spray Natrasol early in the morning or in the cool of the afternoon when most of the nutrients and growth regulators will be in the sap stream within the first hour of foliar application.

### APPLICATION TIMING & RATE

TIMING	RATE
Early Spring	1.5 L/ha
Pre-flowering	3 L/ha
2 weeks after full bloom to increase fruit set	3 L/ha
Routine applications including spray programme	1.5 L/ha
Post-harvest	4 L/ha
Trickle irrigation	1:2000

### APPLICATION NOTES

Natrasol Plants is compatible with most fungicides and pesticides. When mixed and applied at the same time, will stimulate the plants natural immune, defence mechanisms, and improve production.

Check compatibility by mixing a small sample in a glass container to observe any adverse reaction. That may include but not limited to separation, clotting or rapid sedimentation.

Use mixed sprays within 4 hours of mixing and do not store any unused mixture.
